```php
<?php
session_start(); // Start a PHP session

class poo // Define a new class named "poo"
{
    public static function session() // Define a static function named "session" inside the "poo" class
    {
        if (isset($_SESSION['username'])) { // Check if a "username" key is set in the $_SESSION array
            return true; // If it is set, return true
        } else {
            header("Location: index.php"); // If it's not set, redirect the user to the "index.php" page
            exit; // Stop the execution of the script
        }
    }
}
```
